CONTRACT

Teamwork and cooperation between all the members of company provides success in business. Constant feedback and interaction of business people is the powerful method in getting the leading positions in market.

The examples can be found in any kind of business. Further to this evidence that UK stock market is weak form efficient, other studies have compared the share prices toward them being semi strong-form efficient. The bid offer Firth found that the prices were fully and instantaneously adjusted to their correct levels, thus concluding that stock market was semi strong-form efficient. The market's ability to efficiently respond to a short term and widely publicized event such as a takeover announcement cannot necessarily be taken as indicative of a market efficient at pricing.

Another observed discrepancy between the theory and real markets is that at market extremes what fundamentalists might consider irrational behavior is the norm: in the late stages of a bull market, the market is driven by buyers who take little notice of underlying value. Towards the end of a crash, markets go into free fall as participants extricate themselves from positions regardless of the unusually good value that their positions represent. This is indicated by the large differences in the valuation of stocks compared to bear markets. A theorist might say that rational (and hence, presumably powerful) participants should always immediately take advantage of the artificially high or artificially low prices caused by the irrational participants by taking opposing positions, but this is observably not, in general, enough to prevent bubbles and crashes developing. It may be inferred that many rational participants are aware of the irrationality of the market at extremes and are willing to allow irrational participants to drive the market as far as they will, and only take advantage of the prices when they have more than merely fundamental reasons that the market will return towards fair value.

Measuring market penetration accurately is essential to defining a market and discovering new opportunities. Financial institutions use demographics and marketplace intelligence to determine what products and services to offer to both their traditional and online customers and where to locate new branches. Some observers dispute the notion that markets behave consistently with the efficient market hypothesis, especially in its stronger forms. Some economists, mathematicians and market practitioners cannot believe that man-made markets are strong-form efficient when there are prima facie reasons for inefficiency including the slow diffusion of information, the relatively rapid existence of apparently sophisticated professional investors, the way that markets react to surprising news is perhaps the most visible flaw in the efficient market hypothesis. For example, news events such as surprise interest rate changes from central banks are not
